In software engineering, a resource-oriented architecture (ROA) is a style of software architecture and programming paradigm for supportive designing and developing software in the form of Internetworking of resources with "RESTful" interfaces. These resources are software components (discrete pieces of code and/or data structures) which can be reused for different purposes.

Resource-oriented architecture - Wikipedia

1 Introduction Deep neural networks trained with back-propagation learning [52] are a method of choice to solve complex problems with sufficient data.

Tensor Comprehensions: Framework-Agnostic High-Performance

OpenVPN is a free and open-source software application that implements virtual private network (VPN) techniques to create secure point-to-point or site-to-site connections in routed or bridged configurations and remote access facilities. It uses a custom security protocol that utilizes SSL/TLS for key exchange. It is capable of traversing network address translators (NATs) and firewalls.

OpenVPN - Wikipedia

The online application system will close on the deadline date at 5:00 PM Eastern Time. All application components, including letters of recommendation, must be submitted by this deadline. Access to the online application system will not be available to applicants and letter writers after this time ...
