The Color of Art: Free Artist Reference Books and eBooks

Color (American English), or colour (Commonwealth English), is the characteristic of human visual perception described through color categories, with names such as red, orange, yellow, green, blue, or purple. This perception of color derives from the stimulation of cone cells in the human eye by electromagnetic radiation in the visible spectrum. Color categories and physical specifications of ...

Color - Wikipedia

In the visual arts, color theory or colour theory is a body of practical guidance to color mixing and the visual effects of a specific color combination. There are also definitions (or categories) of colors based on the color wheel: primary color, secondary color, and tertiary color. Although color theory principles first appeared in the writings of Leone Battista Alberti (c. 1435) and the ...

Understanding Color & Light. Light is the single basic ingredient required to create photographs. Without light, pictures don't exist. Digital photography is the process of transferring light energy, carried by photons, into digital information, which can be processed and displayed by computers and cameras in the form of digital images.

Color Theory Photography Guide: Photo Editing & Camera

Students pursuing graduate work leading to teaching, museology, art criticism or dealing in works of art will be counseled on course selection. For students considering graduate work in art history, 18 hours of German or French are strongly recommended.

efg's Color Reference Library -- Color Science / Color Theory

The retina of the human eye has two categories of light receptor: rods, which are active in dim light and have no color sensitivity, and cones, which are active in bright light and provide us with our ability to discriminate color. You probably learned that the three types of cone are sensitive to red, green, and blue (R, G, and B).

Color management and color science: Introduction

2. TYPICAL TRANSISTOR CIRCUIT- This is a silicon transistor circuit showing typical voltage values. When the forward base/emitter voltage is 0.6 to 0.7 V, the transistor is silicon. Germanium transistors will have a forward base/emitter bias voltage of 0.2 to 0.3 V This is a silicon transistor because 2.6 base volts minus 1.9 emitter volts equal a forward bias of 0.7 volts indicating a silicon ...
