Big Data is expected to have a large impact on Smart Farming and involves the whole supply chain. Smart sensors and devices produce big amounts of data that provide unprecedented decision-making capabilities.

Big Data in Smart Farming – A review - ScienceDirect

Big data is a term used to refer to data sets that are too large or complex for traditional data-processing application software to adequately deal with. Data with many cases (rows) offer greater statistical power, while data with higher complexity (more attributes or columns) may lead to a higher false discovery rate. Big data challenges include capturing data, data storage, data analysis ...
