1. Introduction. Nanocomposites are composites in which at least one of the phases shows dimensions in the nanometre range (1 nm = 10⁻⁹ m). Nanocomposite materials have emerged as suitable alternatives to overcome limitations of microcomposites and monolithics, while posing preparation challenges related to the control of elemental composition and stoichiometry in the nanocluster phase.

Nanocomposites: synthesis, structure, properties and new

A metal matrix composite (MMC) is composite material with at least two constituent parts, one being a metal necessarily, the other material may be a different metal or another material, such as a ceramic or organic compound. When at least three materials are present, it is called a hybrid composite. An MMC is complementary to a cermet
