SNUG Boston 2008 Clock Domain Crossing (CDC) Design & Verification Rev 1.0 Techniques Using SystemVerilog 6 1.0 Introduction In 2001, I presented my first paper on multi-asynchronous clock design.

### **Clock Domain Crossing (CDC) Design & Verification**

Overview. Verification is intended to check that a product, service, or system (or portion thereof, or set thereof) meets a set of design specifications.

### **Verification and validation - Wikipedia**

In electronic design automation, functional verification is the task of verifying that the logic design conforms to specification. In everyday terms, functional verification attempts to answer the question "Does this proposed design do what is intended?" This is a complex task, and takes the majority of time and effort in most large electronic system design projects.

VERIFICATION vs VALIDATION are hugely confused and debated terms in the software testing world. You will encounter (or have encountered) all kinds of usage and interpretations of these terms, and it is our humble attempt here to distinguish between them as clearly as possible.
