Generic programming is a style of computer programming in which algorithms are written in terms of types to-be-specified-later that are then instantiated when needed for specific types provided as parameters. This approach, pioneered by ML in 1973, permits writing common functions or types that differ only in the set of

types on which they operate when used, thus reducing duplication.

Generic programming - Wikipedia

www.tedi.uq.edu.au About This Guide This guide is designed for academics at The University of Queensland who use presentation software (particularly Microsoft PowerPoint) in the classroom and lecture theatre.
